SAFETY INSTRUCTIONS FOR INSTALLERS

- Carefully read the instructions on this leaflet: they give important information on the safety, use and maintenance of the installation.
- After removing the packing, check the integrity of the set. Packing components (plastic bags, expanded polystyrene etc.) are dangerous for children. Installation must be carried out according to national safety regulations.
- A safety switch, installed before the power supply is recommended.
- Before connecting the set, ensure that the data on the label correspond to those of the network.
- Use this set only for the purposes designed, i.e. for standard door entry systems. Any other use may be dangerous.
- The manufacturer is not responsible for damage caused by improper, erroneous or irrational use.
- Before cleaning or maintenance, disconnect the set.
- In case of failure or faulty operation, disconnect the set and do not open it.
- For repairs apply only to the technical assistance centre authorized by the manufacturer.
- Safety may be compromised if these instructions are disregarded.
- Do not obstruct openings of ventilation/heat exit slits.
- Installers must ensure that manuals with the above instructions are left on connected units after installation, for users’ information.
- All items must only be used for the purposes designed.
- This leaflet must always be enclosed with the equipment.

GENERAL INSTRUCTIONS FOR INSTALLATION

This catalogue contains the wiring diagrams for A.C. call standard Elvox product applications.

1) Run the cabling through separate ducts from those containing lighting and industrial power cables. Use coloured cables as an aid in making the connections.
2) Install the units away from sources of heat and moisture.
3) Apartment intercoms (with or without handset) can be flush wall-mounted with the box vertical.
4) The 8-module DIN housing power supplies are fitted with 30A transformers with 1.6A fuses. The output voltage to the intermittent controls such as door locks and buzzers is 15VAC, do not exceed half the nominal power for continuous operation. Install an auxiliary transformer if the continuous power supply exceeds this limit.
5) When the system is hooked up, check that it is connected to the correct mains voltage. Make sure that all handsets have been replaced before switching on the system.
6) Run the final tests and adjust the volume with the potentiometer (depends on model).
7) Connect a repeater relay box (Art. 170/001) in installations with long cable runs and electric door locks or several buzzers. This unit must also be used for activating devices which operate at higher voltages (125 - 230) such as stairway lights.

IMPORTANT: Carefully follow the indications of the wiring diagrams and use cables of an appropriate section for the length of the cable run.

MIN. SECTION OF CONDUCTORS (mm²)

PHONES SERIES 900

Wall-mounted interphones in thermoplastic material, complete with flexible coil cord they are supplied with screws for mounting on standard back box or with expanding plugs with screws, possibility of adding a second chime Art. 2/817. Available colours: white (code .05), black (code .04). Dimensions: 90x222x70.

900 - One push-button (option of adding a second push-button Art. 2/903); it may be connected to switchboards series 142-152-162.

Dimensions: 90x222x70

902 - One push-button (option of adding a second push-button Art. 2/904 may be inserted (allowing up to 16 push-buttons in total); this phone may be connected to switchboards series 142-152-162.

Dimensions: 90x222x70

900/881 - Same as Art. 900, but for standard door-entry system with conversation privacy; to be used with power supply Art. 881; not to be connected to switchboards.

Dimensions: 90x222x70

149/900 - Desk type interphone for night service; complete with two push-buttons: door lock release and communication with entrance panel; to be used with switchboards series 142 and 162. Dimensions: 90x222x70

Installation instructions:
Fig. 1 - Separate the base of the interphone from the cover by inserting a wide-blade screwdriver in slots and turning it clockwise until the two elements snap apart.

Fig. 2 - Fit the interphone in the previously embedded vertical rectangular box and secure using the two screws provided. Alternatively tighten the same screws, in the expansion plugs (diameter 5) and make the various terminal connections. Fit the interphone upper side at 1.5 mt. height from ground level.

Fig. 3 - Close the interphone by positioning the cover on top and pressing the bottom until the two parts snap together.

PHONES SERIES 870

Wall-mounted interphones in two-colour plastic, complete with flexible coil cord; zinc plated steel base; buzzer and possibility of adding a second bell Art. 2/810 or electronic buzzer Art. 2/816; supplied with screws for mounting on standard box or expanding plugs with screws. Available colours: white-black (code .02), white (code .05) or black (code .04). Dimensions: 71x222x57.

870 - Two push-buttons (door-lock release and additional). This phone may be connected to switchboards series 142, 152 and 162. Dimensions: 71x222x57

870/001 - Same as Art. 870 but with conversation switch on handset, it cannot be used with interphone switchboard. Dimensions: 71x222x57

870/081 - Same as Art. 870, but for STANDARD DOOR-ENTRY SYSTEMS with conversation privacy, to be used with power supply Art. 881. Dimensions: 71x222x57

PHONES SERIES GALILEO

7100

Wall-mounted interphone, with two pushbuttons, available in white or grey, with loudspeaker for calls to systems in the SOUND-SYSTEM range. Mounting on rectangular vertical 3-module back box or by means of expansion plugs. Possibility of adding seven supplementary pushbuttons or other accessories. The interphone can also be desk-mounted by means of the special conversion kit. Adaptable for operation with a.c. call by means of supplementary chimes Art. 7148 (buzzer), Art. 7150 (ding-dong chime) or Art. 7151 (modulated chime). Dimensions: 90x220x72

710R

Interphone as above with built-in buzzer and possibility of adding supplementary chime (Art. 7151 + loudspeaker Art. R090) for intercommunication systems.
INTERPHONE
ACCESSORIES Art. 900-902

**2/901** - Desk-top conversion kit for interphones series 900 - 902; standard colour white (code .05), available also in black (code .04), with 6-conductor cable; complete with fixed terminal block.

**2/902** - Desk-top conversion kit for interphones in the 900 and 902 series. Standard colour white (code 05), also available in black (code 04). Equipped with 12-conductor cable and removable plug and socket.

**MOUNTING INSTRUCTIONS**

Proceed as follows to install the module in interphones series 900 - 902:
1. Remove the housing from the bottom of the unit.
2. Use a screwdriver to prize out the clips on the inside of the housing marked with the arrow ⇒ and remove the cover plate.

**2/903** - Additional single push-button; to be used with interphones series 900 and 902.

**2/904** - Pair of additional keys and push-buttons; to be used with interphones series 902, after removing covers. Available colours: white (code .05), black (code .04).

**Art. 2/903**

**Fig. 5** in common

**Art. 2/904**

**2/906** - Signalling module with red LED. To be used on interphones series 900 and 902 instead of a push-button to indicate open lock or other functions. 15V A.C. or D.C. supply.

**2/9V6** - Signalling module as above, but with green LED.

**MOUNTING INSTRUCTIONS**

Proceed as follows to install the module in interphones series 900 - 902:
1. Remove the housing from the bottom of the unit.
2. Use a screwdriver to prize out the clips on the inside of the housing marked with the arrow ⇒ and remove the cover plate.
3- Replace one of the plastic slides on the hole cover plate with the transparent slide control provided with Art. 2/906.
4- Clip the cover plate into position first on the opposite side to the arrow on the housing. Check that the slide controls are correctly positioned, and only then clip the plastic slide into position on the side marked with the arrow ⇒.
5- Fit the LED module in the bottom of the unit at the clear panel, and make all necessary connections. 15V D.C.-A.C. operating voltage.

MOUNTING INSTRUCTIONS

3- Use a screwdriver to prise out the clips on the inside of the shell marked with the arrow ⇒ and remove the cover plate.
4- Clip the cover plate into position first on the opposite side to the arrow on the shell. Check that the slide controls are correctly positioned, and only then clip the button into position on the side marked with the arrow ⇒.

2/909 - Two-way switching module for switching the phonic line between two external entrance panels (replaces pair of pushbuttons). Standard colour white (code 05), also available in black (code 04).

MOUNTING INSTRUCTIONS

Proceed as follows to install the module in interphones series 902:
1- Remove the outer shell from the bottom of the system unit.
2- Insert push-button on the interphone button
3- Use a screwdriver to prise out the clips on the inside of the shell marked with the arrow ⇒ and remove the cover plate.
4- Clip the cover plate into position first on the opposite side to the arrow on the shell. Check that the slide control are correctly positioned, and only then clip the button into position on the side marked with the arrow ⇒.

N.B.
If there are two electric door locks, a supplementary push-button must be fitted (Art. 2/903) for independent activation of each mechanism.

2/908 - Large key module (replaces supplementary pair of buttons article 2/904). Standard colour white (code 05), also available in black (code 04).

MOUNTING INSTRUCTIONS

Proceed as follows to install the module in interphones series 902:
1- Remove the outer shell from the bottom of the system unit.
2- Insert push-button on the interphone button
3- Use a screwdriver to prise out the clips on the inside of the shell marked with the arrow ⇒ and remove the cover plate.
4- Clip the cover plate into position first on the opposite side to the arrow on the shell. Check that the slide controls are correctly positioned, and only then clip the plastic slide into position on the side marked with the arrow ⇒.

The Art. 2/909 switch module enables phone communication with two external entrance panels. After installing the accessory, connect the BLUE wire to terminal “1” and the WHITE wire to terminal “2” on the phone terminal board and make the connections according to the wiring diagram below:

OPERATION
To communicate with speech unit no.1 after receiving a call, simply raise the handset; to communicate with speech unit no. 2 keep the relative push-button pressed (module Art. 2/909).

N.B.
For other connections follow diagrams provided with power supplies Arts. 836.
2/910 - One-way switching module with RED LED. Used in place of 2 pushbuttons on 902 series interphones for various functions. Power supply voltage 15V d.c. or a.c.

2/912 - N/C pushbutton and external key. Used for automatic entry system control and mounted in place of a single pushbutton.

2/810 - Additional buzzer for Art. 870.

2/816 - Additional chime (electronic buzzer); to be used on interphones series 870; 12V A.C. supply.
**Art. 7148**
Electromechanical chime (buzzer) installed on interphones Art. 7100 for use with AC power supply. 12-15Vac power supply. Consumption: 400 mA

**ELECTRONIC CHIME ASSEMBLY**
1) Separate the base of the interphone from the cover by inserting a screwdriver in the slots and prising open the two elements as shown in Fig. 1-2.
2) Fit the buzzer in its housing on the loudspeaker by pressing it down until it is correctly inserted (Fig. 3).
3) Disconnect the two loudspeaker conductors with faston connectors from the mother board of the interphone.
4) Connect the two terminals on the buzzer to a voltage supply of 12 to 15 Vac.

**Art. 7151**
Electronic modulated chime. Installed on interphones Art. 7100 for use with AC power supply. 12-15V AC power supply.

**Example of chime Art. 7151 connections**
Phones Art. 7100 + Art. 7151

**Art. 7150**
Electronic ding-dong chime. Installed on interphones Art. 7100 for use with AC power supply. 12-15V ac/ 15÷20V dc power supply.

---

**Art. 7140**
Desktop conversion kit for interphone series 7100; with 6-core cable and fixed terminal board.

**Art. 7A40**
Desktop conversion kit for interphone series 7100; with 16-core cable; equipped with removable plug and socket.
MOUNTING INSTRUCTIONS

Opening of interphone

Fig. 1) Remove the cover (part A) on the base of the interphone, insert the card and fix with the screw provided. On inserting the card make sure the cursor be inserted on the switch (the cursor arrow must be oriented upwards, Fig. 4).

Fig. 2) Disconnect the red wire from the loudspeaker.

Fig. 3-4) Connect the disconnected wire to the pin on card Art. 7153 and connect the wire of terminal N. 6 on Art. 7153 directly to the loudspeaker.

Call volume selection

<table>
<thead>
<tr>
<th>Position</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>

<tr>
<td>3</td>
<td>high call volume</td>
</tr>
</tbody>
</table>

N. B.
Terminals 7-8 are shorted in position 0 (call exclusion), enabling the connection of an optical device (art. 7164) if required.

Art. 7152
Supplementary pushbutton for interphones Art. 7100 complete with bridge for connection to other pushbuttons. Contact capacity 24Vdc-ac 0.5A

Art. 7153
4-position switching module for regulation of call volume on chimes Art. 7150 - 7151. Possibility of call exclusion.
Art. 7154
Red led signalling module; occupies space of one pushbutton.
Operating voltage: 15Vdc/ac.

MOUNTING INSTRUCTIONS

Fig. 1 - Remove the housing from the bottom of the unit.
Fig. 2 - Detach the cover on the back of the unit by pressing the internal clips and sliding it out. This done, fit the module with transparent cover in its place by pushing it down until it snaps shut.
Fig. 3 - Fit the LED module in the bottom of the unit at the clear panel, and make all necessary connections.

Art. 7155
Conversation privacy card for insertion in interphone Art. 7100. Used with special power supply unit Art. 881. In this case only the user receiving the call from the entry panel is enabled for conversation with the door entry panel.

CARD ASSEMBLY ON INTERPHONE
1) Remove the three jumpers on connectors A, B and C from the interphone mother board (see figure).
2) Fit card art. 7155 onto the connector marked A-CN4 taking care that the tab on the card fits into the slot on the interphone motherboard.

Art. 7156
2-way 2-position switching module to connect two amplified entry panels (Art. 930/836); occupies space of 2 standard pushbuttons.

MOUNTING INSTRUCTIONS
Fig. 1: Remove the cover from the interphone.
Fig. 2: At the rear of the unit, push the internal clips to remove the hole cover plate. Insert the black key in place of the hole cover plate and push down until it clicks into place.
Fig. 3: Fit the switching module in alignment with the transparent key on the lower section of the interphone and make the relative connections.

Connect respectively the RED wire to terminal 1 and the WHITE wire to terminal 2 on the interphone terminal block and wire as shown in the diagram overleaf.

OPERATION
To communicate with entrance panel 1 following a call, lift the handset and speak; to communicate with entrance panel 2, press the pushbutton on module art. 7156 to speak with the caller.
Wiring diagram for Art. 7156

# White wire
* Red wire

Power supply Art. 836

Art. 7157
N/C pushbutton and external key. Normally used for automatic entry systems.
Contact capacity: 24Vdc or ac 0.5A max.

MOUNTING INSTRUCTIONS
**Modular Entrance Panels**

Flush-mounted modular series for standard door-entry systems, without speech unit; panel in natural (code .14) or dark brown (code .16) anodized aluminium, complete with push-buttons and removable name-tags in self-extinguishing plastic; 24V 3W tube lamps; back-box; luminous push-button for panel lighting. Preset for mounting of speech unit Art. 930 or Art. 930/836.

**Mounting Instructions**

To separate front plate from back box, follow these instructions (see Fig. 1):

1. Loosen screw in lower of front plate to limit of thread, using special key provided.
2. Lift lower border of front plate slightly outwards and upwards.
3-4: Detach front plate by pulling it downwards.

For mounting of wiring cables use proper holes by removing plastic caps placed on entrance panel bottom.

**N.B.** Additional panel Art. 2995/... may be combined with same letters Art. 2990/... panels.

When using additional modular panels, match them with speech unit entrance panel, paying attention that they are at the same height (see Fig. 2).

The back box upper side is to be flush-mounted at an advisable height of 1.40 to 1.70 m. from floor level.
MOUNTING INSTRUCTIONS

Flush mount back box at wall level.

Fig. 1 The drawing shows the components of the panel:
A - Front plate
B - Speech unit
C - Frame
D - Back-box
E - Special key for security screws

Figs. 2 - 3 These panels may be mounted either horizontally or vertically. In this case back-boxes are separated from the panels and frames and assembled as shown in the drawing, in order to be able to mount them at the same height. For this purpose, special brackets are used for holding back-box in position in the plaster. These brackets may be vertically or horizontally fitted.

Fig. 4 Make the holes for the electric wires to pass through, placing the wires in the correct position.

Fig. 5 To gain access to the name-tags, take out the name-tag holder from the rear, as shown in the drawing.

NAME-TAG REMOVAL

Remove the name-tag as follows:
1- First detach the front plate from its support.
2- Pull the name-tag holder gently out and downwards to remove it (Fig. 3) and extract the name-tag.
3- Refit the name-tag and its holder (the holder will click into place).

IMPORTANT: To install the unit on a gate, first fit a metal plate for mounting the entrance panel (Fig. 4).

ACCESSORY FOR MODULAR ENTRANCE PANELS

2/292 - Double key with name-tag and push-button, to replace single push-buttons on modular panels series 2900, 2950, and 2970 to double the number of push-buttons.

VANDAL RESISTANT PANELS

Provided with die-cast aluminium plate with special paint treatment, resistant against atmospheric conditions; standard colour: “PAINTED BRONZE” (code .28). They are supplied with special screws and security key; push-buttons in anodised aluminium and name-tags in self-extinguishing plastic. Complete with push-button holder frame in zinc-plated steel; 24V 3W tube lamp for panel lighting.

Can be combined with die-cast flush-mounted back box Art. 320S or rain guards Art. 320P - 322P - 323P.

Preset for mounting of speech unit art. 930.

ADDITIONAL VANDAL RESISTANT PANELS

To be matched with entrance panels Art. 3200 using proper supports provided.

TECHNICAL CHARACTERISTICS OF VANDAL-RESISTANT ENTRANCE PANELS

Die-cast aluminium plate with special paint treatment; die-cast aluminium back box; metallic buttons with name-tags removable from rear; panel bulb 24V 3W; security fitting system with stainless steel screws, screwed into galvanized steel frame with special tool; preset for speech unit Art. 930 - 930/832 - 930/836 - 930/894.

Available with 0, 1, 2, 3, 4, 5 simple push-buttons or with 6, 8, 10 double push-buttons in two rows. Possibility of fitting panels 325X series with push-buttons only.

MOUNTING INSTRUCTIONS

Flush mount back box at wall level.

Fig. 1 The drawing shows the components of the panel:
A - Front plate
B - Speech unit
C - Frame
D - Back-box
E - Special key for security screws

Figs. 2 - 3 These panels may be mounted either horizontally or vertically. In this case back-boxes are separated from the panels and frames and assembled as shown in the drawing, in order to be able to mount them at the same height. For this purpose, special brackets are used for holding back-box in position in the plaster. These brackets may be vertically or horizontally fitted.

Fig. 4 Make the holes for the electric wires to pass through, placing the wires in the correct position.

Fig. 5 To gain access to the name-tags, take out the name-tag holder from the rear, as shown in the drawing.

Carry out connections to speech unit by means of removable terminal block, wire push-buttons, bulb and door-lock. After testing, fit front plate, by using security screws with special supplied tool (Fig.1 point “E”).

The back box upper side is to be flush-mounted at an advisable height of 1.40 to 1.70 m. from floor level.

Fig. 6 - Mounting with rainproof cover.

The rain-proof cover is mounted on external wall-mounted vandal-proof security panels. To install, follow the procedure previously described but without using the back box. The panel may be set up with 1, 2 or 3 rows using rain-proof covers Art. 320P, 322P or 323P respectively.
Panel and rainproof cover in natural anodized aluminium (code .14) or dark brown (code .16); with 24V 3W bulb. This panel is supplied with lock on front opening. To transform it to rear opening, simply invert lock with the hinges of the two openings (Fig. 1 - 4).

**Preset for speech** unit 930 series and camera, Art. 570 or 571 with VIDEO-MOVING system mounting.

**MOUNTING INSTRUCTIONS**

The back box upper side is to be flush-mounted at an advisable height of 1.40 to 1.70 m. from floor level.

This panel is provided with letter-box with front opening. To obtain rear opening follow these instructions:

Fig. 1-2
Open front opening with special screw provided.
Remove front plate by pulling it downwards after loosening screw A.

Fig. 3
Open rear part of panel by loosening the screws on lock block. Remove parts B-C-D and lock. Insert them again reversing their position.

Fig. 4
Carry out electric wiring to speech unit and to camera, write name on name-tag and block front plate. Then fix front opening with lock system removed from rear opening.

**Panel with Letter Box with Front or Rear Opening**

**Panel with Letter Box and Rear Opening**

Door entry panel in RAL 7035 grey painted aluminium mit protection in antiUV tecnopolimers, separated from the zinc plated pre-painted housing. Preset for outdoor station (audio only) Art. 930. Equipped with 24V 3W lamp.
The MULTI-SYSTEM modular entrance panel component system has been designed to provide the option of combining panels of various types of audio and video door entry systems using only a few basic components. The panels can be prearranged for built-in wall installation and equipped with rainproof cover frames, if required. The same device can be installed on a wall surface using the appropriate back box. These products are constructed in extruded aluminum and coated with a paint, especially resistant to atmospheric attack, and technopolymers with excellent technical characteristics and provide a protection level of IP45.

Several modules are available as described below.

The modules are easily inserted into the module-holding frame as indicated:

ASSEMBLY
The MULTI-SYSTEM panel uses the module holder frame in the 1, 2 and 3 module versions (Art. 9081, 9082 and 9083 respectively). Assembly proceeds as follows:
1) Open the frame and disconnect the lower head (Fig. 1).
2) Insert the modules and separators (detail A, Fig. 2).
3) Close the frame and secure the lower head (Fig. 3).
4) Fit the light holder supplied with the modules to the button holder (Fig. 4).
5) Fit the buttons on the button holder (Fig. 5).
6) Fit the electronic unit to the button holder frame (Fig. 6).
7) Fix the frame to the external frame with wall-mounting box (Fig. 7).
8) To gain access to the name card, remove the card clip from behind as shown in Fig. 8.
INSTALLATION
When the modular entrance panels are flush-mounted in a wall, the flush mounted back box, Art. 9091 is used for 1-module version, Art. 9092 for 2-modules, Art. 9093 for 3 modules. More modules can be obtained by combining the three models. Back boxes are constructed in hot-galvanized sheet steel with heads made from engineering plastic. Each back box is supplied with two fittings permitting you to join several built-in models together (Fig. 1) so various models can be used contemporaneously providing more keys. Removing the plastic from the heads, located in correspondence to the fittings, creates a passage for connecting cables. Panel installation for the intercom installation should be done at 1.65 meters, measuring from its upper edge to the ground surface (Fig. 2).

When more than one panel is used, we recommend use of the series 91XX hole-cover frame or the series 92XX rainproof cover to ensure that the plates are kept aligned and any damage which might be done to the wall during installation is covered (Fig. 3 and 4).

If installation is on the wall surface, a series 93XX back box should be used suitable to the module-holder frames selected, together with the series 92XX rainproof protection of the same size.

Fig. 1
Fig. 2
Fig. 3
Fig. 4

CODED DOOR LOCK Art. 9015
Keypad module for coded lock opening. Allows separate opening of up to four door locks via a personal code.
The functions are controlled entirely by a microprocessor which handles communication with the central unit Art. 9050 and user messages via the three LEDs on the keypad module.
The keypad module can be connected in parallel with up to three others, powered by a single central unit Art. 9050.

INSTALLATION
The keypad module is installed on MULTISYSTEM panels like any other module of the series. The coded lock can be installed on audio and/or video entry systems, or by itself.

BRASS DOOR ENTRY PANELS SERIES PATAVIUM

Panel and push-button in nickel-plated brass with artistic gilding and protective transparent.
They may be configured with only one row of push-buttons (series 21XX, 120mm long, for 1 to 10 users).
Double row of push-buttons (series 22XX, 180 mm long, for 2 to 28 users).
All of them include flush-mounted back boxes and are pre-arranged or speech unit series 930.
Both types of door entry panels may be associated to brass door entry panels series 20XX with push-buttons only.
Flush wall/desk-mounted or surface wall/desk-mounted. Beige plastic housing; handset with coil cord; modular line selectors with 10 push-buttons; acoustic call with LED; conversation privacy.

**N.B.:** When flush-mounted the switchboard protrudes 60 mm.

*149/162 - Switching module for external line on switchboards series 162; beige thermoplastic housing; mounting with expanding plugs with screws.

Dimensions: 100x85x30.
**LIGHT INDICATOR PANELS**

A single model, available in flush-fitting table-top, wall-mounted or wall flush-mounted version, complete with housing in black thermoplastic material. The panel features an intermittent acoustic signal and permanent light, together with keypad for individual resetting of light indicators in modules of 10. The panel is also equipped with a general signal reset button and may be connected in parallel to other indicator panels, complete with general signal reset for individual panels. These panels are powered by transformer art. 832/030.

N.B.: When panel is flush-mounted it protrudes 35 mm.

**SPEECH UNITS**

Consisting of loudspeaker and microphone with amplified electret.

930 - For standard door-entry system. It can be mounted on all types of door entry panels.

930/836 - For standard door-entry system; with built-in double amplifier; only supply is required; ideal for detached and semi-detached houses with one main entrance; to be used with power supply Art. 836. It can be mounted on all types of door entry panels.

**THREE-NOTE ELECTRONIC CHIMES**

In white thermoplastic material; mounting on rectangular standard back box or with expanding plugs with screws.

860A - Three-note and two-tone chime for calls from two different entrances. 230V A.C. supply (+6, -10% 50-60Hz). Dimensions: 140x140x50

860B - Three-note and two-tone chime for calls from two different entrances. 15V A.C. supply. Dimensions: 140x140x50

860C - Three note/three tone chime for calls from three different entrances; designed to fit a standard 9V battery to enable operation also in the event of a power failure. Power supply: 15V ac - dc

**REPEATER RELAY**

170/001 - Repeater relay, for activation of stair-lighting or several chimes; 3A 230V load to contacts; 12V D.C. or A.C. supply. Dimensions with covers inserted: 70x115x50

**DIODE TERMINAL BLOCK**

2/834 - 20-diode terminal block to be used in conjunction with power supply unit article 6834 on door entry systems for building complexes. One terminal block is required every 20 users. Dimensions with covers inserted: 70x115x50
### 8-DIN MODULE POWER SUPPLY

8-DIN module housing in grey thermoplastic material; complete with protective covers for terminal blocks; mounting on a plate or with expanding plugs with screws; two spare fuses 230 V (+6%, -10%) 50-60 Hz supply.

- **831** - For standard door-entry system; external volume adjustment; 10-15V 30VA output. Dimensions with covers inserted: 140x115x65

- **836** - For standard door-entry system with amplified speech unit Art. 930/836; 10-15V 30VA output; 10.5V D.C. 0.4A output stabilized and protected against overloads. To be used with switchboards series 142, 152 and 162. Dimensions with covers inserted: 140x115x65

- **881** - For standard door-entry system with conversation privacy; external volume adjustment; 15V 20VA output. Dimensions with covers inserted: 140x115x65

- **838** - For intercommunicating phones with STANDARD DOOR-ENTRY SYSTEMS with one entrance panel; automatic switching of conversation when a call is made; external volume adjustment; 10-15V 30VA output. Dimensions with covers inserted: 140x115x65

### SWITCHING MODULES FOR SEVERAL OUTDOOR UNITS

8-DIN module housing in grey thermoplastic material; complete with protective covers for terminal blocks; mounting on a plate or with expanding plugs with screws. These items switch conversation and lock release control.

- **839/302** - Switching module for standard door-entry system with two outdoor units with automatic switching when a call is made; to be added to standard power supplies. Several switching modules may be connected in parallel to wire several outdoor units (in this case one output must be used for all subsequent connections). Dimensions with covers inserted: 140x115x65.

- **839/303** - Same as art. 839/302, but for three outdoor units. Dimensions with covers inserted: 140x115x65

- **839/402** - Similar to the switch Art. 839/302 but designed for installation in systems based on the switchboard Art. 152. Dimensions with covers inserted: 140x115x65.

- **839/403** - Similar to the switch Art. 839/303 but designed for installation in systems based on the switchboard Art. 152. Dimensions with covers inserted: 140x115x65.

### TRANSFORMERS

4-DIN module housing in grey thermoplastic material; complete with protective covers for terminal blocks; mounting on a plate or with expanding plugs with screws.

- **M832** - Safety transformer with 12V 20VA output; protection against short-circuiting and overheating with PTC; 230 V (+6%, -10%) 50-60 Hz supply. Dimensions: 75x90x65

- **832/030** - Safety transformer with 15V 30VA output; protection against short-circuiting and thermal protection with PTC; 230 V (+6%, -10%) 50-60 Hz supply voltage. Dimensions: 75x90x65
Blister pack, complete with all articles necessary (except conductors and locks) to install on standard door-entry system. 230 V (+6%, -10%) 50-60 Hz supply voltage.

894 - For single residence; two-wire connection in parallel from transformer to interphone, entrance panel and lock; consisting of: 1 interphone Art. 894C standard colour white (code .05), 1 panel Art. 894T with built-in speech unit, 1 transformer Art. M832, with 230 V (+6%, -10%) 50-60 Hz supply. Packing dimensions: 225x350x70

7894 - As per kit 894, but equipped with GALILEO series interphone with three-note chime Art. 794C. This kit enables connection of two interphones in parallel in the same residential unit. The supplementary interphone must be the same, i.e. Art. 794C.

894/900 - Same as Art. 894 but with flush-mounted panel series 9000 (Art. 9911) with built-in speech unit Art. 894E; in white colour. Packing dimensions: 225x350x70

Kit 7894/900 - As per kit 894/900, but equipped with GALILEO series interphone with three-note chime Art. 794C. This kit enables connection of two interphones in parallel in the same residential unit. The supplementary interphone must be the same, i.e. Art. 794C.

895/001 - For single residence consisting of: 1 two push-button interphone Art. 870 standard colour white (code .05), 1 panel Art. 895T with built-in speech unit, 1 transformer Art. M832, 230 V (+6%, -10%) 50-60 Hz supply. Packing dimensions: 225x350x70

895/901 - Same as Art. 895/001 but with flush-mounted panel series 9000 (Art. 9911) with built-in speech unit Art. 930/832, interphone in white colour. Packing dimensions: 225x350x70

895/002 - For double residence consisting of: two push-button interphones Art. 870 standard colour white (code .05), 1 panel Art. 895D with built-in speech unit, 1 transformer Art. M832 with 230 V (+6%, -10%) 50-60 Hz supply. Packing dimensions: 300x350x70.

895/902 - Same as Art. 895/002 but with flush-mounted panel series 9000 (Art. 9912) with built-in speech unit Art. 930/832, interphone in white colour. Packing dimensions: 300x350x70.
### OPEN VOICE SINGLE-CHANNEL INTERCOMS

Desk-top version with beige thermoplastic housing Art. 4000/A01 is complete with conversation push-button and ON-OFF switch; arts. 4000/A03-A06-A12-A18 are complete with signalling of memorized electronic call allowing identification of calling intercom; line selector keyboards, talk-listen push-button, keys for call and dictation to sub-masters; external volume adjustment. Built-in power supply; talk operations are carried out only by master unit. Connection to standard sub-masters series 4050 or to entrance panels arts. 9951 or 9971, to loudspeakers and power amplifier art. 4040 for acoustic paging calls. 230 V (+6%, -10%) 50-60 Hz supply voltage.

### INTERCOMS ALLOWING ONLY ONE CONVERSATION

Desk-top intercommunicating sub-masters in beige thermoplastic housing. Series 4100 differs from series 4000 as conversation may be made among all installation units. Supply and amplification from amplified power supply art 4199/800. These units are equipped with PRIVACY key, but users may be called by loudspeakers or by any electronic chime; talk key; electronic call key; line selector keyboard for selecting desired unit and LED signalling engaged lines. Talk operations are carried out by calling station. Connection to sub-master outdoor unit arts. 9951 or 9971 (to call entrance panel a separate bell must be connected); to loudspeaker art. 4055 or power amplifier art. 4040 for acoustic paging call.

### MULTIPLE CONVERSATION INTERCOM

Desk top intercommunicating masters in beige thermoplastic housing. Multiple simultaneous conversation among units of the same installation, up to a maximum of half the number of installed units. Connection by one common wire plus two wires for each unit installed. Each unit is supplied by main low voltage power supply and is complete with amplifier, engaged and free line leds, electronic call key, PRIVACY key and line selector keyboard.

**N.B.:** Conversation functions are performed by the master only, leaving the sub-master disengaged. The system may be connected to a power amplifier or loudspeaker horns to page calls and make public announcements (no reply facility).
INTERCOMS

POWER SUPPLIES
8-DIN module housing in grey thermoplastic material; complete with protective covers for terminal blocks; mounting on a plate or with expanding plugs with screws; two spare fuses; 230 V (+6%, -10%) 50-60 Hz supply voltage.

4399/800 - Power supply for intercommunicating sub-masters with multiple simultaneous conversations; 18-20-22V outputs. Dimensions with covers inserted: 140x115x65
12-DIN module housing in grey thermoplastic material; complete with protective covers for removable terminal blocks; mounting on a plate or with expanding plugs with screws; 230 V (+6%, -10%) 50-60 Hz supply; protection against short-circuits and thermal protection with PTC; 60 VA maximum absorbed power.

4199/800 - Power supply for intercommunicating sub-masters. Dimensions with covers inserted: 208x135x90.

SPECIAL SUB-MASTERS
For connection to units series 4000 and 4100.

9951 - Illuminated panel with grey paint finish 9000 series complete with one push-button. Supplied with speech unit and back box. Panel dimensions: 100x159 Back box dimensions: 89x136x50.

9971 - Illuminated panel from 9000 series like article 9951 but in surface wall-mounted version. Supplied complete with rainproof cover with IP45 protection. Max. dimensions 118x178x68.

POWER AMPLIFIERS
For acoustic paging call by loudspeakers in all intercommunicating installations. Thermoplastic container which can be wall-mounted or inserted on a panel with 24-module DIN rail; 230 V (+6%, -10%) 50-60 Hz supply voltage; 100V constant voltage output. They may be connected to intercoms series 4000-4100-4330 and to interphones series 902 - 7100 - 710R.

4040 - Amplifier with 50W output power with possibility of answering only for intercom installations series 4000 and 4100. Dimensions: 210x244x100

LOUDSPEAKERS
With 100V D.C. transformer input.

4056 - Loudspeakers with line transformer; adjustment of maximum absorbed power from 1.5W to 10W to be connected to amplifiers series 4040/...

4057 - Waterproof loudspeakers with line transformer; adjustment of maximum absorbed power from 2.5W to 20W to be connected to amplifiers series 4040/...

4058 - Loudspeakers with line transformer; adjustment of maximum absorbed power from 0.25W to 4W to be connected to amplifiers series 4040/...
ELECTRONIC INTERCOMMUNICATING PHONES

Wall-mounted phone in two-colour beige/brown (code .10) or white/brown (code .08) plastic housing; flexible coil cord; electronic chime for internal calls; mounting on vertical standard back box or with expanding plugs with screws.

851/001 - 40 calls with 4 simultaneous and private conversations for use with power supply art. 856/800. Possibility of communication with an entrance panel and/or paging call by using power supply art. 857/800
Dimensions: 135x222x90

ACCESSORIES

For electronic intercommunicating phones.

2/805 - Desk conversion kit for interphone art. 851/001, complete with terminal block and 11-conductor cable.

2/850 - Device to be inserted into art. 851/001 to receive acoustic paging call directly to interphones by using power supply art. 857/800.

INSTALLATION INSTRUCTIONS OF INTERCOM

The intercom can fit wall installation. A metal bracket can be secured by wedging in dowels or to a rectangular vertical box (see fig. 2). To loose phone from bracket prise the release lever, lift and remove the phone.

Fig. 1 - Operating of intercom
Fig. 2 - Wall mounting

Installation of the desk type: detach from back of the phone the slanting base by lifting its jutting end (fig. 3). Wire the set with Art. 2/805 as shown in fig. 4. Reassemble hooking first the thin end of the base (fig. 5).

INSTRUCTIONS FOR INSERTION OF ACCESSORY ART. 2/850

Remove cover and then wires of loudspeaker from connector marked A-A on the left of the hook. The same wires must be slipped into connector A-A of module Art. 2/850 that must be inserted on the three free poles A-A-BL of connector. At last remove the bridge between A and B of the connector under the terminal block and connect the three wires of Art. 2/850; the orange one on A, the white one on B and the blue one on C. In this way, it is possible to make an acoustic paging call directly on the loudspeaker of the sets by connecting terminals 9 and 11 power supply to intercoms.

POWER SUPPLIES

8-DIN module housing in grey thermoplastic material; complete with protective covers for terminal blocks; mounting on a plate or with expanding plugs with screws; 230 V (+6%, -10%) 50-60 Hz supply.

856/800 - Power supply for 4 simultaneous and private intercommunicating conversations; for up to 20 interphones, beyond this number a second power supply must be used. 12V D.C. 1A output stabilized and protected against overloads.
Dimensions with covers inserted: 140x115x65

12-DIN module housing in grey thermoplastic material; complete with protective covers for terminal blocks; mounting on a plate or with expanding plugs with screws; two spare fuses; 230 V (+6%, -10%) 50-60 Hz supply; protection against short-circuiting and overheating with PTC; 60VA maximum absorbed power.

857/001 - Like article 856/800, this power supply unit also features a decoder to activate the audio door entry system and/or page calls directly on interphones using article 2/850. Used in conjunction with amplifier 4040 calls may be paged on loudspeakers or horns.
70 VA maximum absorbed power.
Dimensions 185x275x106
FM WIRELESS INTERCOMS

Three-channel units for up to 3 simultaneous conversations; no wire connection required; conversation is accomplished by utilizing standard wiring when intercom is plugged into A.C. outlet.

**4900** - FM wireless intercom. Three audio channels with membrane touch keys and automatic or manual conversation; each unit is complete with noise filter and with a special P.L.L. circuit (Phase Locked Loop) so that FM communication is less disturbed and more reliable than AM system. Communication is possible up to about 800 m provided that the two units are supplied by the same phase and that there are no distribution transformers. 230V (+6%, -10%) 50-60 Hz supply voltage.
Dimensions: 178x121x51

FM INTERPHONES

Pair consisting of an interphone A and an interphone B allowing duplex conversation; no wire connection required, just plug into 230 V A.C. outlet.

**4950** - Pair of white FM interphones. Intercommunication between the two phones is only possible provided they are both powered by the same phase and are not interposed by transformers.
Open voice or electronic sound call.
Power supply: 230 V (+6%, -10%) 50-60 Hz supply
Dimensions: 95x220x70
2-WIRE DOOR ENTRY SYSTEM, KIT ART. 894-7894

SYSTEM DESCRIPTION
The kit, powered by a M832 transformer, contains: 1 interphone Art. 894C or 7894C and 1 surface wall mounted panel Art. 894T or flush-mounted panel Art. 9911 and a speech unit Art. 894E, with 2-cable connection.

OPERATING PRINCIPLE
When a caller presses the call button on the external panel, a modulated call tone sounds on the interphone. The user can lift the handset and converse with the caller without time limit. The call is interrupted during lock activation.

Audio and lock connection: use cable 1 mm² up to 50 m. distance.

N.B. Connections marked as a dotted line apply to the insertion of interphone (where relevant) in parallel to original interphone and a call repeater device Art. 2/841.

Audio connection: use two wires 0.75 mm² up to 150 m. distance.
Audio and lock connection: use cable 1 mm² up to 50 m. distance.
5-WIRE DOOR ENTRY SYSTEM, KIT ART. 895

SYSTEM DESCRIPTION
The kit, powered by a M832 transformer, contains: 1 interphone Art. 870 (two-button) and 1 external panel with external unit. The call from the external panel sounds a buzzer.
The kits 895/002 and 895/902 contain 2 interphones Art. 870 and a two-button external panel, for two-family installations without reserved call function. The cable connecting the external panel with the interphone should not be the same as that connecting the transformer with the panel.
For the use of the second interphone button see version n° 6.

OPERATING PRINCIPLE
When a caller presses the call button on the external panel, a call tone sounds on the interphone buzzer. The user can lift the handset and converse with the caller without time limit.

N.B. The conductors between brackets are to be considered if a second interphone is fitted.

CAUTION: The voice common contact on interphones (terminal 3) must be connected to terminal “3” on the external entry panel as shown in the wiring diagram. Connection of terminal 3 on the interphone directly to “0” on the transformer will cause buzzing on the voice circuit.

Follow carefully the drawing.
Use cable 1 mm² up to 100 m. distance.
AMPLIFIED STANDARD DOOR ENTRY SYSTEM WITH POWER SUPPLY ART. 831

SYSTEM DESCRIPTION
The power supply enables audio connection between the external unit and the internal units without reserved call function. The door signal sounds a second buzzer internal/external to the interphone (see versions n° 1 and 2).

OPERATING PRINCIPLE
When a caller presses a call button on the external entrance panel an acoustic signal is emitted on the internal unit, at which point, the user can pick up the internal handset an speak to the caller without time limits.

AMPLIFIED DOOR ENTRY SYSTEM WITH POWER SUPPLY ART. 881

SYSTEM DESCRIPTION
The power supply enables audio connection between the external unit and the internal units with reserved call function. The door signal sounds a second buzzer internal/external to the interphone (see versions n° 1 and 2).

OPERATING PRINCIPLE
By pressing entrance panel push-button the caller sets the buzzer ringing and the electronic memory arranges connections of the wanted intercom circuit. At the same time an electronic device disconnects previously engaged intercoms. Raising of the handset enables communication with the outdoor station and excludes possibility of eavesdropping. Disconnecting of the intercom occurs when pressing the door opener push-button.

On interphones Art. 7100 remove jumpers “A-B-C” and insert card Art. 7155 in connector “CN4”. The use of card Art. 7155 enables:
- Direct lock opening: set connector to position “SD”.
- Lock opening after call: move the connector to position “SR” and connect a relay Art. 170/001 as shown in the wiring diagram.

POWER SUPPLY
Art. 881 - 20VA

RELAY
Art. 170/001
AMPLIFIED DOOR ENTRY SYSTEM WITH INTERCOMMUNICATING PHONES IN A SINGLE APARTMENT

SYSTEM DESCRIPTION
Power supply Art. 831 is mainly used for audio connection between external unit and internal users; the latter can converse with each other while cutting out the external unit.
This type of system can be installed in individual apartments or in several apartments using switching module Art. 5493/800 for each intercommunicating network. In this way each user can have an internal intercommunicating network with absolute conversation privacy both for outgoing calls to the entry panel and for internal intercommunicating or other calls.
The door signal sounds a second buzzer internal or external to the interphone (see versions n° 1 and 2).

OPERATING PRINCIPLE
When a caller presses a call button on the external entrance panel an acoustic signal is emitted, at which point, the user can pick up the internal handset and speak to the caller without time limits.
External communications: when external bell rings, lift handset to speak with entrance panel. Internal communications: lift handset and press the call push-buttons corresponding to the interphone you want to talk to. Outdoor unit is automatically excluded. If during internal communication somebody calls from entrance panel, both handsets must be hanged up; for subsequent communication with outside, lift one handset.

WIRING INSTRUCTIONS

The diagram shows the maximum number of interphone connections. To connect fewer interphones, proceed as follows: with three interphones use items with three push-buttons (Art. 7100 with 1 additional push-button):
- push-button 1 corresponds to terminal 7 and operates the door lock.
- Push-buttons 2 and 3 correspond to terminals 8 and 9 and are reserved to communicating calls. Connect then the first three terminal blocks (terminals 1 to 9).

N.B. On Art. 7100 cut the cable connecting SD and 4. The interphone is equipped with 2 pushbuttons; to increase the number of pushbuttons used, insert Art. 7152 (maximum 7 to obtain a total of 9 pushbuttons).

Important:
Before connecting the system, connect the jumpers on interphones Art. 7100 as indicated in the wiring diagram.
WIRING INSTRUCTIONS
The diagram shows the maximum number of interphone connections. To connect fewer interphones, proceed as follows: with three interphones use items with three push-buttons (Art. 902 with 2 additional push-buttons); push-button 1 corresponds to terminal 7 and operates the door lock. Push-buttons 2 and 3 correspond to terminals 8 and 9 and are reserved to intercommunicating calls. Connect then the first three terminal blocks (terminals 1 to 19).

N.B. On Art. 902 cut bridge from terminals 3-4-5 near the first push-button and remove the remaining bridge between terminals 3 and 5 (see drawing). Art. 902 is supplied with only one push-button. To increase the push-button number add one simple push-button Art. 2/903 and several pairs of additional push-buttons Art. 2/904 (max. 7 to obtain 16 push-buttons).
AMPLIFIED STANDARD DOOR ENTRY SYSTEM WITH POWER SUPPLY ART. 838

SYSTEM DESCRIPTION
Power supply Art. 838 is mainly used for audio connection between external unit and internal users; the latter can converse with each other while cutting out the external unit.

OPERATING PRINCIPLE
When a caller presses a call button on the external entrance panel an acoustic signal is emitted, at which point, the user can pick up the internal handset and speak to the caller without time limits.

External communications: when external bell rings, lift handset to speak with entrance panel. Internal communications: lift handset and press the call push-buttons corresponding to the interphone you want to talk to. Outdoor unit is automatically excluded.

If during internal communication somebody calls from entrance panel, both handsets must be hanged up; for subsequent communication with outside, lift one handset.

CONNECTION TO TERMINALS OF POWER SUPPLY:

PRI: Supply 230V A.C. +6% -10%
50-60Hz 30VA protected by fuse F 0.25A

1: Handset receiver
2: Handset microphone
3: Handset receiver and microphone common
5: Audio system supply

6: Common receiver and microphone for speech unit
7: Speech unit microphone
8: Speech unit loudspeaker

0-10-15: Output 15V A.C. 1.6A (on intermittent operation) protect by fuse F 1.6A.
Output 10V A.C.

Note: When using continuous duty 0-15 outputs, do not connect loads over 0.8A.

Power supply constitute SELV sources in compliance with the requirements stipulated in Article 411.1.2.2 of CEI standard 64-8 (ed. 1998).

Production is subject constant quality checks:
WIRING INSTRUCTIONS

The diagram shows the maximum number of interphone connections. To connect fewer interphones, proceed as follows: with three interphones use items with three push-buttons (Art. 7100 with 1 additional push-button); push-button 1 corresponds to terminal 7 and operates the door lock. Push-buttons 2 and 3 correspond to terminals 8 and 9 and are reserved to intercommunicating calls. Connect then the first three terminal blocks (terminals 1 to 9).

N.B. On Art. 7100 cut the cable connecting SD and 4. The interphone is equipped with 2 pushbuttons; to increase the number of pushbuttons used, insert Art. 7152 (maximum 7 to obtain a total of 9 pushbuttons).

INTERPHONE SETTING
ART. 7100 FOR INTERCOMMUNICATING SYSTEMS

Important:
Before connecting the system, connect the jumpers on interphones Art. 7100 as indicated in the wiring diagram.
WIRING INSTRUCTIONS

The diagram shows the maximum number of interphone connections. To connect fewer interphones, proceed as follows:

1. To increase with only one push-button Art. 902 and several pairs of additional push-buttons Art. 2/903 (max. 7 to obtain 16 push-buttons).
2. To add one simple push-button Art. 2/903 and several pairs of additional push-buttons Art. 2/904 (max. 7 to obtain 16 push-buttons).

N.B. On Art. 902 cut bridge from terminals 3, 4, 5 near the first push-button and remove the remaining bridge between terminals 3 and 5 (see drawing). Art. 902 is supplied with only one push-button.

WIRING DIAGRAM:
INTERCOMMUNICATING INTERPHONES
WIRING DIAGRAM OF INTERCOMMUNICATING PHONES SERIE GALILEO WITH POWER SUPPLY ART. 836

WIRING INSTRUCTIONS
The wiring diagram illustrates the connection procedure for the maximum number of interphones. For smaller installations, proceed as described below: to connect four interphones, use interphones with three buttons (Art. 7100 plus 1 additional button). Terminals 1 to 4 connect the common wires. Terminals 7, 8 and 9 connect the three call buttons. Terminals 1 to 9 must therefore be connected on the first four terminal blocks as shown in the wiring diagram. Art. 7100 is supplied already fitted with two buttons. The unit may however be expanded to accommodate a further 7 buttons (for a total of 9 buttons) using additional buttons Art. 7152.

IMPORTANT:
On interphones Art 7100 connect terminals 1 and 3 between them. Also disconnect the red handset wire.

CABLE CROSS-SECTION
Use a 0.25 mm² multi-twisted pair cable to connect the line. For distances exceeding 200 metres, use a cable with a larger cross-section.

○ Connect the 1A diode 1N4004 in the event of buzzing on AC calls.
OPERATION
The main interphone “A” is enabled for calls and conversations with all internal units. Internal units can only call and converse with main interphone “A”. All communication are without conversation privacy.

IMPORTANT:
On interphones Art 7100 connect terminals 1 and 3 between them. Also disconnect the red handset wire.

CABLE CROSS-SECTION
Use a 0.25 mm² multi-twisted pair cable to connect the line. For distances exceeding 200 metres, use a cable with a larger cross-section.

Connect the 1A diode 1N4004 in the event of buzzing on AC calls.
WIRING INSTRUCTIONS

The wiring represents the connection of the maximum number of phones. For connecting more phones follow instructions written below. For distance above 200 meters increase section.

N.B. On Art. 902 remove bridge from terminals 3, 4, and replace it by connecting terminals 2, 4.

Connect 1A 1N4004 diode in case of alternating current hum during conversation.

CABLE SECTION

Connection line can be made with multipair 6/10 telephone cable. For distance above 200 meters increase section.

WIRING DIAGRAM OF INTERCOMMUNICATING INTERPHONES SERIES 902 WITH POWER SUPPLY ART. 836

WIRING DIAGRAM N° CI-1454/4
**ELECTRIC DIAGRAMS FOR PHONES FROM 1 TO 16.**

Remove bridge from terminals 3-4-5 and replace it by connecting terminals 2-4-5.

Cabling can be done with multipair 0.25mm² telephone cable. For distance beyond 200 meters increase section.

N.B. On the master phone Art. 902 (A) cut bridge between terminals 3 and 4.

**POWER SUPPLY**

Art. 836 - 30VA
On interphone “A” cut the connection cable between “SD” and “4” and connect the “4” terminal to the “CH” chime terminal.

On interphone “B” cut the connection cable between “SD” and “4” and connect terminals 1-4-“CH”.

Remove bridge between terminal 5 and terminal 3.

Remove bridge 3-4-5 and connect to 1-4-5.
INSTALLATION WITH SWITCHBOARD ART. 142 WITH POSSIBILITY OF NIGHT SERVICE INTERPHONE AND EXTERNAL AUDIO DOOR

SYSTEM DESCRIPTION
Allows calls from the switchboard to the user and vice-versa; interphone call switching to an internal unit for night service with optional communication with an external unit; complete with leds for fitting to the interphones. Single-wire hookup: 1 common and 1 return wire for each interphone.

SWITCHBOARD INSTALLATION
Switchboard may be desk-top flush-mounted, desk-top mounted or surface wall-mounted. For surface wall-mounting, carry out following operations: open housing and loosen screws fixing the two metal side supports. Slide supports out and reverse their position. In this way, the position of switchboard front panel is tilted, allowing handset hooking.

OPERATION OF SWITCHBOARD ART. 142
During “day” operation (Key GN released and G switched on), the switchboard allows private conversations between it and the interphones.

To communicate from switchboard to interphones: press corresponding line selector key and push-button “CH”.

To communicate from interphones to switchboard: simply raise the handset.

The switchboard incorporates a flashing light and intermittent buzzer indicating incoming calls.

During “night” operation (key GN pressed down and N switched on), the switchboard is disconnected and all calls are switched through to the night service phone. (During “day” operation, press key CN on the switchboard to reach the night service phone).

During “night” operation, press key PE on the night service phone to communicate with the entrance panel.

Push-button AP opens the electric door lock.

In switchboards with more than 80 lines a multiplier key “=X” allows doubling of the number of lines, i.e. every key enables insertion of two different users.

To communicate from switchboard with an interphone:
- lift handset
- choose on multiplier key the white or red lamp corresponding to the desired interphone.
- press line selector key, the lamp with the same colour of the multiplier key lamp chosen, comes on.

To connect a different line, press again the multiplier key. All other functions are the same.

To replace a warning light extract it using the tweezers (supplied), after removing top part of key.
WIRING DIAGRAM:
PORTER’S SWITCHBOARD INSTALLATION

WIRING DIAGRAM OF SWITCHBOARD ART. 142

WIRING INSTRUCTIONS
On interphones Art. 902 remove bridge from terminals 3-4-5 e replace it by connecting terminals 2 and 5. Insert diode as indicated in wiring diagram. In intercoms Art. 710R remove connection cable from terminal C-4, bridge terminal 1 and 5. Insert a diode as per diagram.

In intercoms Art. 870, bridge terminal 2 e 4/5 and insert a diode as per diagram.

The switchboard is prearranged to operate:
1) with intercoms only: two wire system (1 common, 1 call) for each phone. No other connection required.
2) with intercoms and night service desk intercom: wiring system: all connections shown in diagram except those indicated by dotted lines.
3) with intercoms, night service desk intercom, outdoor station: all connections as from the whole of diagram.
4) when using for the first time if buzzing noise is not regular; adjust pressure of the vibrating part of the buzzer.

WIRING DIAGRAM N° CC2015
AMPLIFIED DOOR ENTRY SYSTEM WITH MAIN SWITCHBOARD ART. 152 PROVIDED WITH INTERNAL-EXTERNAL MODE

SYSTEM DESCRIPTION
Allows calls from the switchboard to the user and vice-versa; in INTERNAL mode all calls from the external panel are routed through the switchboard; in EXTERNAL mode they are sent directly to the interphone.

The door call is made by installing a supplementary internal or external buzzer on the interphone (see version 3 or 4).

SWITCHBOARD INSTALLATION
Switchboard may be desktop flush-mounted, desk-top mounted or surface wall-mounted. For surface wall-mounting, carry out following operations: open housing and loosen screws fixing the two metal side supports. Slide supports out and reverse their position.

In this way, the position of switchboard front parallel is tilted, allowing handset hooking.

OPERATION OF SWITCHBOARD ART. 152
During “internal” operation (key IE released and I switched on), the switchboard allows private conversations between it and the interphones.

To communicate from switchboard to interphones: press corresponding line selector key and push-button "CH".

To communicate from interphones to switchboard: raise the handset, and press the door lock push-button.

To answer from switchboard the operator must press the key corresponding to the light on.

The switchboard is provided with a 50 Hz acoustic signal indicating busy line, besides an electronic device switches all calls from entrance panel to keeper’s doorbell.

During “external” operation (key IE pressed down and part E switched on), the switchboard allows conversations without privacy among interphones and entrance panel.

The switchboard can communicate only with the entrance panel.

Calls from entrance panel are sent directly to interphones.

The same push-button used to call the switchboard operates door lock release by special relay mounted on switchboard.

In switchboards with more than 80 lines a multiplier key allows doubling of the number of lines.

i.e. every key enables insertion of two different users.

To communicate from switchboard with an interphone:
- lift handset
- choose on multiplier key the white or red lamp corresponding to the desired interphone.
- press line selector key, the lamp with the same colour of the multiplier key lamp chosen, comes on.

To connect a different line, press again the multiplier key. All other functions are the same.

INSTALLATION WITH INTERNAL INTERCOMMUNICATING SWITCHBOARD ART. 162 WITH POSSIBILITY OF NIGHT SERVICE INTERPHONE AND EXTERNAL AUDIO DOOR ENTRANCE PANEL.

SYSTEM DESCRIPTION
Similar to the series 142 unit but with the option of putting any two interphones in contact with each other; during calls between interphones the switchboard is free to respond to other calls; acoustic and visual end-of-call signal; possibility of connection to an external line.

SWITCHBOARD INSTALLATION
The switchboard may be desktop mounted, flush wall-mounted or flush/desk-top mounted. For surface all-mounting carry out following operations: open housing and loosen screws fixing the two metal side supports. Slide supports out and reverse their position. In this way, the position of switchboard front panel is tilted, allowing handset hooking.

OPERATION OF SWITCHBOARD ART. 162
During “day” operation (key GN released and G switched on), the switchboard allows private conversations between it and the interphones. To communicate from switchboard to interphones: press corresponding line selector key and push-button “CH”.

To communicate from interphones to switchboard: simply raise the handset. The switchboard incorporates a flashing light and intermittent buzzer indicating incoming calls.

During “night” operation (key CN pressed down, N switched on), the switchboard is disconnected and all calls are switched through to the night service phone. During “day” working, press key CN on the switchboard to reach the night service phone. During “night” operation, press key PE on the night service phone to communicate with the entrance panel. Push-button AP opens the service door lock. Key “==” on the switchboards allows communication between two phone units or between an internal phone unit and an outside line (through terminals LL), only if part G double key GN is pressed down.

- To allow conversation between two users press the two line selectors corresponding to the desired users, then press “==”. The switchboard is thus excluded from conversation. The operator can answer other users’ calls by lifting the handset without pressing the line selector push-button.
- When the two interphone handsets have been replaced, their leds on the switchboard light up together and the switchboard buzzer sounds intermittently.
- At this point the line keys for the two interphones and the “==” key reset (not active). If the switchboard is busy with another call, releasing the above keys will interrupt the call; to resume the call press the line key for the unit in question.
- To connect a user with the external line, press the line key for the user in question and subsequently “==”.

N.B: While the switchboard can make reserved calls to the internal units, the “==” key must not remain down with the leds on, unless when interphones are calling each other or when an interphone is making an external call.
To replace the bulbs slide off the upper part of the button and remove the bulb with the tweezers provided with the system.
WIRING INSTRUCTIONS

On interphone Art. 902 remove bridge from terminals 3-4-5 and replace it by connecting terminals 2 and 5. Insert diode as indicated in wiring diagram. In intercoms Art. 710R remove connection cable from terminal C-4 and bridge terminal 1 and 5. Insert a diode as per diagram. In intercoms Art. 870, bridge terminal 2 and 4/5 and insert a diode as per diagram.

The switchboard is prearranged to operate:

1) with intercoms only; two wire system (1 common, 1 call) for each phone. No other connection required.
2) with intercoms and night service desk intercom: wiring system: all connections shown in diagram except those indicated by dotted lines.
3) with intercoms, night service desk intercom, outdoor station: all connections as from the whole of diagram.
4) when using for the first time if buzzing noise is not regular; adjust pressure of the vibrating part of the buzzer.
LUMINOUS INDICATOR SYSTEM ART. 145/...

SYSTEM DESCRIPTION
When one of the pushbuttons connected to the lines is pressed, the relative indicator on the signalling panel illuminates and an intermittent acoustic signal is activated. More than one signal can be activated at the same time. In the event of multiple calls, partial reset is possible on single keys only. Alternatively, if the reset key is pressed, all indicators are switched off and the acoustic signal is shut off.

Panel installation
See installation procedure for switchboards Art. 142-152-162

SINGLE INDICATOR PANEL CONNECTION

Transformer
Art. M832 - 832/030

Connection with buffer battery.
System operation is ensured also in the event of a power failure. Operation autonomy with the battery depends on the type of battery used. Batteries of at least 12V 1.2Ah are recommended.

CONNECTION OF INDICATOR PANELS IN PARALLEL

Transformer
Art. M832 - 832/030

Pannello indicatore luminoso
Art. 145/...
AMPLIFIED DOOR ENTRY SYSTEM WITH AUTOMATIC SWITCHING MODULES ART. 839/302 AND 839/303

SYSTEM DESCRIPTION
The switch can be connected to power supplies Art. 831 - 881 - 838 which allows for the audio connection between external and internal units. Switch Art. 839/302 - 303 allows for automatic switching of the audio and lock opening lines between 2 or 3 external units.

OPERATING PRINCIPLE
When a caller presses a call button on an external entrance panel, the audio function and door lock release are automatically activated for that door entrance panel while the other entrance panels remain disabled. The last call made is given priority over all preceding calls.

WIRING DIAGRAM: DOOR ENTRY SYSTEM WITH SEVERAL OUTDOOR UNITS
With switching module Art. 839/303 the third speech unit is connected like Art. 839/302 by using terminals P3-7-8-9.

A- Entrance panel with speech unit
   Art. 2900-2970-2990-3200 and series 9000
B- Additional push-button for lock
C- Electric lock 12V A.C.
D- Speech unit Art. 930
WIRING DIAGRAM FOR STANDARD DOOR ENTRY SYSTEM, WITH CONVERSATION PRIVACY, TWO OUTDOOR UNITS AND POWER SUPPLY ART. 881

N.B. With the switching modules Art. 839/303, the third outdoor station is connected in the same way as Art. 839/302, by using terminals. P3-7-8-9.

N.B. On interphones Art. 7100 remove jumpers “A-B-C” and insert card Art. 7155 in connector “CN4”. The use of card Art. 7155 enables:
- Direct lock opening: set connector to position “SD”.
- Lock opening after call: move the connector to position “SR” and connect a relay Art. 170/001 as shown in the wiring diagram.
WIRING DIAGRAM: DOOR ENTRY SYSTEM WITH SEVERAL OUTDOOR UNITS

WIRING DIAGRAM N° C1993/1

WIRING INSTRUCTIONS
The diagram shows the maximum number of interphone connections. To connect fewer interphones, proceed as follows: with three interphones use items with three push-buttons (Art. 902 with 2 additional push-buttons), push-button 1 corresponds to terminal 7 and operates the door lock. Push-buttons 2 and 3 correspond to terminals 8 and 9 and are reserved to intercommunicating calls. Connect then the first three terminal blocks (terminals 1 to 9).

N.B. On Art. 902 cut bridge from terminals 3-4-5 near the first push-button and remove the remaining bridge between terminals 3 and 5 (see drawing). Art. 902 is supplied with only one push-button. To increase the push-button number add one simple push-button Art. 2/903 and several pairs of additional push-buttons Art. 2/904 (max. 7 to obtain 16 push-buttons).

N.B. On Art. 7100 remove the jumper between SD and 4. Art. 7100 is equipped with 2 pushbuttons. To add further pushbuttons, insert Art. 7152 (maximum 7 pushbuttons) to obtain a total of 9. With interphone Art. 7100 the wiring diagram is reduced to 9 units.

N.B. With switching module Art. 839/303 the third speech unit is connected like Art. 839/302 by using terminals P3-7-8-9.
VERSION FOR STANDARD DOOR ENTRY SYSTEM WITH TWO OR SEVERAL OUTDOOR UNITS AND AUTOMATIC SWITCHING MODULE ART. 839/302-303

A- Entrance panel with speech unit
   Art. 2900-2970-2990-3200 and series 9000
B- Additional push-button for lock
C- Electric lock 12V A.C.
D- Speech unit Art. 930

Note: Several speech units may be connected by wiring switching modules Art. 839/302-3 in series.

Connect:
To terminal block “0” of power supply Art. 831-881
To terminal block “15” of power supply Art. 838

Connect:
To terminal block “15” of power supply Art. 831-881
To terminal block “0” of power supply Art. 838
AMPLIFIED DOOR ENTRY SYSTEM WITH SWITCHBOARD ART. 152 WITH INTERNAL/EXTERNAL MODE AND SEVERAL OUTDOOR UNITS WITH AUTOMATIC SWITCHING FUNCTION

SYSTEM DESCRIPTION
The power supply is Art. 836 which allows for the audio connection between the internal and external units. Switch Art. 839/402 - 403 allows for automatic switching between 2 or 3 external units.

OPERATING PRINCIPLE
When a visitor presses a pushbutton on one of the entry panels (if the switchboard is set to “EXTERNAL” mode) the audio and lock on the entry panel where the call was made are enabled automatically; in this way operation of other entry panels is inhibited. The last call has priority over previous calls. For a description of operation of the entire system, see operation of switchboard Art. 152.

WIRING DIAGRAM OF STANDARD DOOR ENTRY SYSTEM WITH SWITCHBOARD
WITH SEVERAL OUTDOOR UNITS
**SYSTEM DESCRIPTION**

The system allows connection of various apartment blocks with a main entrance panel. Every single block may be equipped with an entrance panel with speech unit and interphones in each apartment. Main door station may have a speech unit entrance panel with names of all users in all buildings. Art. 839/302 in every apartment block, selects audio-door-lock connection of calling entrance panel (main and secondary). Every building is thus perfectly independent and enables simultaneous communication of interphones, in every apartment with its own entrance panel.

The door signal sounds a second buzzer internal or external to the interphone (see version n° 1 and 2).

   and series 9000
B- Additional push-button for lock
C- Electric lock 12V A.C.
D- Speech unit Art. 930
SYSTEM DESCRIPTION
The installation allows for the connection of several buildings equipped with stairway panels with a main external unit controlled by porters switchboard Art. 154. Each building installation includes a panel with external unit and interphones in the various apartments. The main external unit consists of a panel with external unit which unifies all the users in all the buildings. The same switchboard groups the call lines for all the interphones. For the door signal an internal or external buzzer must be installed on the interphone (see variant 1 or 2). The switchboard allows for connection of several buildings, each with its own stairway panel and main panel; it is also equipped with two operating modes: INTERNAL and EXTERNAL. When set to INTERNAL mode, the building interphones can communicate with the switchboard while those of another building can communicate with its own stairway panel; when set to EXTERNAL, the building’s interphones can communicate both with their stairway panel and the main external panel.

All internal units can communicate with their own stairway panels; an interphone in one building can also communicate with main external panel or the switchboard and at the same time any user in any building can communicate with his own stairway panel.

The door lock button activates the stairway panel lock after an external call has been received; when the external call is made from the main panel, only the main panel lock (internal jumper on Art. 6834 set to A) can be activated, or both the main lock and the lock at the stairway panel from which the call is made (internal jumper on Art. 6834 set to B).

OPERATING PRINCIPLE
When in INTERNAL mode (button I/E on I) the system enables the reserved call function between the switchboard and the interphones. To call an interphone from the switchboard, press the line selector button and press CH; to call the switchboard from the interphone, lift the handset and press the button marked with a bulb symbol. To answer a call from the switchboard, press the line switch corresponding to the illuminated led. If another interphone handset is raised while a call is already in progress between an interphone and the switchboard, a line engaged tone (50 Hz) sounds on the handset. Nonetheless, in the other buildings reserved calls can be made from the stairway panels to their interphones.

When in INTERNAL mode, all calls from the main panel are intercepted by the switchboard, which can communicate with the external unit by momentarily selecting E with the I/E switch and also open the door lock by pressing AP. On the contrary to transfer a call from the panel to the interphone, the switchboard must be in "EXTERNAL" mode, with the relative interphone line selector activated. In this mode the call from panel to interphone is not reserved. In normal "EXTERNAL" mode operation (I/E on E) the main panel calls the interphone directly and the latter can open the door lock with the button marked with the key symbol. The call from the main panel to the interphone is not reserved, but a simultaneous call can be made from a stairway panel to one of its internal units.

Wiring diagram N° C2997C

WIRING INSTRUCTIONS FOR THE CONNECTION OF 2- OR 3-NOTE ELECTRONIC CHIME ART. 860B WITH CALL FROM TWO DIFFERENT ENTRANCES.

Wiring diagram N° C2997D

The chime must be supplied by 15V A.C. A potentiometer inside the chime regulates sound intensity. Mounting on standard recessed box or with expanding screws. Calls may be made from two separate push-buttons. The first call is identified by a three-note chime. The second call is identified by a two-note chime.
The chime is supplied by 230V A.C. A potentiometer inside the chime regulates sound intensity. Chime may be wall-mounted, either on standard recessed box or with expanding screws. Calls may be made from two separate push-buttons. The first call is identified by a three-note chime. The second call is identified by a two-note chime.

**CONNECTION OF CHIME CARD ART. 860C OPERATED BY 9 V BUFFER BATTERY ONLY.**

- Button 1= 1-tone note
- Button 2= 2-tone note
- Button 3= 3-tone note

**N.B.**
- Buttons P1-P2-P3 may be used either individually or together as illustrated in the diagram.
- The setting of internal jumpers 1-2-3 does not affect chime card operation.

**CONNECTION OF CHIME CARD ART. 860C OPERATED BY A.C. POWER SUPPLY WITH CHIME ACTIVATION CONTROLLED BY FREE BUTTONS.**

- Button 1= 1-tone note
- Button 2= 2-tone note
- Button 3= 3-tone note

**N.B.**
- Buttons P1-P2-P3 may be used either individually or together as illustrated in the diagram.
- The setting of internal jumpers 1-2-3 does not affect chime card operation.
CONNECTION OF CHIME CARD ART. 860C OPERATED BY A.C. POWER SUPPLY WITH CHIME ACTIVATION CONTROLLED BY A.C. OR “SOUND SYSTEM” CALL SYSTEM.

To select the type of note, adjust the three internal settings as follows:
Jumper set to position 1 = 1-tone note
Jumper set to position 2 = 2-tone note
Jumper set to position 3 = 3-tone note

N.B.
The chime is not activated if the jumper is not set to any one of the three positions.

CONNECTION OF CHIME CARD ART. 860C IN PARALLEL WITH MECHANICAL CHIMES (A.C. POWER SUPPLY ONLY: 12-15 VAC).

To select the type of note, adjust the three internal settings as follows:
Jumper set to position 1 = 1-tone note
Jumper set to position 2 = 2-tone note
Jumper set to position 3 = 3-tone note

N.B.
The chime is not activated if the jumper is not set to any one of the three positions.

N.B.:
- Connect the diode provided to terminals “-” and “CH” as illustrated in the diagram.
- A battery must be fitted for this type of application.

To select the type of note, adjust the three internal settings as follows:
Jumper set to position 1 = 1-tone note
Jumper set to position 2 = 2-tone note
Jumper set to position 3 = 3-tone note

N.B.
The chime is not activated if the jumper is not set to any one of the three positions.

N.B.:
- Connect the diode provided to terminals “-” and “CH” as illustrated in the diagram.
- A battery must be fitted for this type of application.

Follow all the instructions illustrated in application system 1 with the exception of the diode, which must be connected in parallel to the call button. No 9 V battery is required if the diode is installed.
DESCRIPTION OF SYSTEM
A single power supply unit Art. 856/800 is sufficient to connect up to 20 electronic interphones. For additional interphones (maximum 40) two power supply units Art. 856/800 are required, each powering the same number of units. In the case of installations with extremely long cable runs or with excessive voltage drops whereby the voltage between terminals 1 and 2 of the interphone is less than 10 Vdc, an additional power supply unit Art. 856/800 must be installed at the minimum voltage point. The second or third power supply unit may be connected using terminals 1, 2 and 3 while leaving the others disconnected.
N.B. The conductors must be installed in ducts well away from the mains power supply.

INTERPHONE CODING
Coding is effected by connecting the wires complete with faston connector to the relative terminals A-B-C-D and 1-2-3-4-5-6-7-8-9-10 located inside the unit. For example, to code unit A3, connect the relative wires to terminals A and 3 and to code unit D10, connect the relative wires to terminals D and 10.

OPERATING PRINCIPLE
Each unit up to a maximum of 40 is coded with a letter (A-B-C-D) and number (1 to 10). The system permits a maximum of 4 simultaneous conversations each with conversation privacy.
To make a call, lift the handset and press first the button marked with the corresponding letter and then the button marked with the corresponding number. An acoustic tone in the receiver indicates that the unit being called is enabled to reply. No signal means that the unit is engaged or all the communication lines are busy. Do not call repeatedly and in any case, release the call button as soon as the acoustic tone terminates. To repeat a call to the same user or make a new call, follow the same procedure, each time replacing the handset to disengage the communication line.

PLEASE CONTACT OUR TECHNICAL DEPARTMENT FOR WIRING EXCEEDING 200 METERS.
ELECTRONIC INTERCOMMUNICATING PHONES WITH DOOR ENTRY SYSTEM AND PAGING CALL FUNCTION

DESCRIPTION OF SYSTEM
Power supply Art. 857/001 connects electronic intercommunicating phones to an entrance panel and/or acoustic paging system. One power supply unit Art. 857/001 is sufficient for up to 20 units. In the case of additional units (maximum 39) or installations with extremely long cable runs or with excessive voltage drops whereby the voltage between terminals 1 and 2 of the unit is less than 10 Vdc, an additional power supply unit Art. 856/800 must be installed (with each of the two suppliers powering the same number of units). The second or third power supply unit may be connected using terminals 1, 2 and 3 while leaving the others disconnected.

N.B. The conductors must be installed in ducts well away from the mains power supply.

In the case of paging systems using acoustic power diffusors connected to amplifier Art. 4040, the diffusor conductors (terminals 0-100V) and interphone conductors must not run in the same duct. Furthermore, the diffusors must be installed well away from the call units or be acoustically isolated to avoid the characteristic whistling caused by the feedback.

Installation with entrance panel. In the case of installations with entrance panel, terminal 10 must be connected to activate the door lock in addition to terminals 1 to 7.

Installation with paging system using power diffusors. To operate the paging function with amplifier Art. 4040, terminal 9 must be connected in addition to terminals 1 to 7.

Installation with paging function on intercom units. The paging function on intercom units is activated by mounting accessory Art 2/850 in the relative units and connecting these by way of terminals 1 to 7 and terminals 9 and 11. The paging function may be installed in conjunction with the entrance panel and amplifier Art. 4040.

INTERPHONES CODING
Each set is given its codified number slipping the bridges on to their respective pegs specified by letters A-B-C-D and figures 1-2-3-4-5-6-7-8-9-10 which are inside the set. For instance to codify A3 the bridges must be shifted to positions A and 3. To codify C10 the bridges must be shifted to C and 10 positions.

IMPORTANT
On installations with entrance panel and/or paging system, code D10 is reserved and cannot therefore be used as an interphone code.

OPERATING INSTRUCTIONS
Each set is coded with a letter (A-B-C-D) and a number (1-10).
Up to 39 sets can be connected; code D10 is reserved for the paging call or speech unit (Power supply Art. 857/001). Up to 4 conversations can be held simultaneously and without interference.
To make a call lift the handset and enter the code for the desired line.
If you hear a tone, the line is available; if not, either the line is engaged or four calls are already in progress.
If at first you cannot connect, do not keep pressing the call button; release it as soon as the call tone terminates. To repeat the call to the same user or to make a new call, repeat the procedure, replacing the handset between calls to disengage the line.

COMMUNICATIONS WITH THE OUTDOOR UNIT
When the buzzer sounds to indicate a call from the external panel, respond by pressing D and 10. The door lock button is activated only in this situation.

ACOUSTIC PAGING CALLS
If available with Art. 2/850 or Art. 4040, press D10 push-buttons then keep pressed “O” push button from the intercom to make a paging call and hold down. This cuts out the external unit and relays the call to the other units or external loudspeakers.
NOTE: The unit is fitted with a “muting” device which cuts out and reactivates the receiver during pauses in conversation. This impedes crosstalk from other calls in progress.

**IMPORTANT:** If Art. 2/850 is installed in the system, the number of wires connecting the interphones to each other and to the power supply is given in parentheses.
N.B.
The terminal N. 8 in the intercoms is used for connecting an additional bell via relay Art. 170/001, as per the schematic drawing with dotted wiring.

N.B: POWER SUPPLIES SHOULD BE INSTALLED DIVIDING THE INTERCOMS UNIFORMLY, CARRYING OUT CONNECTIONS AS PER THE EXEMPLIFYING DIAGRAM.

PLEASE CONTACT OUR TECHNICAL DEPARTMENT FOR CABLE RUNS EXCEEDING 200 METERS.
INTERCOMMUNICATING ELECTRONIC INTERPHONES WITH OUTDOOR UNIT AND PAGING CALL FUNCTION VIA LOUDSPEAKERS AND/OR DIRECTLY VIA THE INTERPHONES

N.B.
The terminal N. 8 in the intercoms is used for connecting an additional bell via relay Art. 170/001, as per the schematic drawing with dotted wiring.

N.B: POWER SUPPLIES SHOULD BE INSTALLED DIVIDING THE INTERCOMS UNIFORMY, CARRYING OUT CONNECTIONS AS PER THE EXEMPLIFYING DIAGRAM.

PLEASE CONTACT OUR TECHNICAL DEPARTMENT FOR CABLE RUNS EXCEEDING 200 METERS.

WIRING DIAGRAM N° CI1569
SYSTEM DESCRIPTION
The system allows for connection of up to 18 sub-masters to a master unit with two wires for each connected unit. A paging call system can also be connected using an amplifier Art. 4040.

The master controls all calls between itself and the sub-masters. The system is powered by the power supply incorporated in the master.

SUB-MASTERS
Sub-masters Art. 4055, 4058/001 and 4050 allow for conversation with the master unit, but cannot make calls to it. The master unit cannot be cut out (“PRIVACY”) from the call - every sound can be heard from the master. If calls to the master are to be made, simply install a call button (N.O.) in parallel with the unit itself.

Sub-masters Art. 9951 and 9971 differ from the preceding units in that: calls can be made to the master; they do not have the “PRIVACY” function, however. The 4050/001 is the only sub-master which allows for calls to the master and privacy function. Pressing and holding down the “PRIVACY” button cuts out the master; to restore conversation between the two, release the button.

OPERATION OF INTERCOM MASTER ART. 4000/A01
Intercom Art. 4000/A01 allows for connection of a single sub-master, but not the amplifier Art. 4040. To call the sub-master (which can be a normal desktop unit, an external panel or a loudspeaker) from the master press the call button, announce the call, release the talk button and wait for the sub-master to reply. When the sub-master replies, press the talk button again to talk to the sub-master and release it to listen. Once the call is over, switch off the master with the OFF button. The sub-master calls the master by pressing its button which sounds a 800 Hz buzzer on the master. When the master replies, the call starts and is controlled by the master as described above. If using the 4050/001 sub-master, press the “PRIVACY” key at the end of the call to cut out the master. The master also has a volume adjustment knob.

OPERATION OF INTERCOM MASTER ART. 4000/001
The 4000/001 is similar in operation to the 4000/A01, with the difference that it can only be used with the 4040 series amplifier.

OPERATION OF INTERCOM MASTER ART. 4000/A03-A06-A12-A18
These masters allow 3, 6, 12 and 18 sub-masters respectively to be connected, as well as the 4040 series amplifier. The amplifier must be connected to the last line of the master (the 3rd, 6th, 12th or 18th respectively). To call one of the sub-masters (which can be a normal desktop unit, an external panel or a loudspeaker) from the master, press the appropriate selector and press the CALL button. When the sub-master replies, press the talk button again to talk to the internal unit and release it to listen. At the end of the call, deactivate the intercom selector key. The sub-master calls the master by pressing its button which sounds a 800 Hz buzzer on the master and lights up the led corresponding to the calling intercom. To talk, press the relevant selector key and use the talk button as described above. At the end of the call deactivate the selector key and if using sub-master Art. 4050/001 press the “PRIVACY” button.

If the 4040 series amplifier is connected, to make a paging call press the last selector key on the master (the 3rd, 6th, 12th or 18th respectively) and then the talk button to make the “OPEN VOICE” announcement. The 4000/A01-A06-A12-A18 masters are fitted with a “DICTATION” key which locks the talk button in transmission mode. To enable this mode, press the talk button and “DICTATION” key simultaneously. The master also has a volume adjustment knob.

WIRING DIAGRAM:
INTERCOM MASTERS
**WIRING DIAGRAM OF STANDARD MASTERS SERIES 4000/A01 AND 4000/A03**

**WIRING DIAGRAM N° 11360-2**

**NOTE**

- Incorrectly connection to terminals 1 and 4 sounds a continuous call tone and lights up the line led on the master unit in the OFF state in this case invert wires on the sub-masters.
- External sub-master Art. 9951 or 9971 is for installation of an electric entry unit. This unit is fitted with a call button only.
- Horn loudspeaker Art. 4055 is intended for use in noisy environments (factories, workshops, large stores). Connect to terminals 1 and 4. The call is made by short-circuiting the line with a button (see diagram).
- Both masters and sub-masters can be wall-mounted with the bracket.

Use only the last line button for connecting the master to amplifier Art. 4040 for paging calls.
Connect terminals 3, 4 and 5 of Art. 4000/A03 to terminals M-C, I-T and R of Art. 4040. The loudspeaker cable must be connected to terminals 0-100 with wires of at least 0.75 mm² section.
The loudspeakers must be connected to the line in parallel. Adjust the internal repeater so that the total power consumption is less than the amplifier output. Full instructions are supplied with the amplifier Art. 4040.
CABLING LINE

The cabling consists of a common line and a return line for each connected sub-master.

MAKE SURE NOT TO INVERT THE WIRES IN THE SUB-MASTER UNITS: the audio call wire must be connected to terminal 4 and the common line to terminal 1.

First connect all the sub-masters, then the master: connect the common line to terminal 19 and then the individual call lines. If the master emits a call tone while the connections are being made, the lines are inverted at the sub-master in question; simply invert the connections at the sub-master.

For cable runs up to 100 m use 0.25 mm² section wires (increase proportionally as the cable run exceeds this limit).

TERMINALS OF MASTER:
No. 1 to No. 18 SERVICE PHONIC CALL LINE.
No. 19 COMMON
No. 20 AMPLIFIER SUPPLY CONTROL.

Use only the last line button for connecting the master to amplifier Art. 4040 for paging calls. This button activates the power supply relay.

Connect as follows:
- amplifier terminal M-C to master terminal 6, 12 or 18;
- amplifier terminal R to master terminal 20;
- amplifier terminal I-T to master terminal 19.

The loudspeaker cable must be connected to terminals 0-100 with wires of at least 0.75 mm² section. The loudspeakers must be connected to the line in parallel. Adjust the internal repeater so that the total power consumption is less than the amplifier output.

Full instructions are supplied with the amplifier Art.
SYSTEM DESCRIPTION
The system, powered by a single 4198/800, allows for connection of up to 19 intercommunicating masters or up to 18 internal units and paging call system via amplifier Art. 4040. The system allows for only one call at a time.

OPERATING INSTRUCTIONS
To call: first press desired line key, then call push-button.
When called unit answers hold talk button pressed down and only release it to hear reply.
When conversation is over, press line key again to disengage the line.
In order to answer, the called person must only make sure that PRIVACY key is off, without pressing any other key. At the end of conversation, privacy may be continued if PRIVACY key is pressed again. When any line key is pressed, the red LED on all units comes on, indicating to other users that the line is busy. Volume control: inside power supply Art. 4199/800.

WIRING INSTRUCTIONS
Diagram shows installation 4 intercommunicating masters Art. 4103.
- Installation requires 9 ordinary conductors, 4 conductors for intercommunicating calls and one (optional) conductor for acoustic paging calls.
- The first two terminals must be connected through a telephone cable to a cable couple, separate from other conductors. A multicouple telephone cable may be used up to 200 m.
- Installation must be carried out through separate ducting, avoiding other electric networks.

INSTALLATION OF INTERCOMS WITH SPECIAL SUB-MASTERS

SYSTEM DESCRIPTION
The intercommunicating interphones can be connected to external panels and/or loudspeakers; if the interphone has a call button, an external buzzer must be used to notify the intention to call the intercommunicating switchboard.

WIRING DIAGRAM OF INTERCOMS SERIES 4100 WITH SPECIAL SUB-MASTERS
INTERCOMMUNICATING MASTERS ALLOWING SEVERAL SIMULTANEOUS CONVERSATIONS

DIRECTION FOR USE
To call: press first the line selector engaging the wanted station, then the call key or the conversation key (for open voice calling). On being answered speak while keeping the conversation push-button pressed, release it to listen.
At end of conversation press again the line selector to free the line.
Repeating from called stations only requires that the key marked "PRIVACY" is disconnected.
At the end of the conversation press the "PRIVACY" key again to prevent eavesdropping.
N.B. Pressing of a line selector switches on one of two warning lights (red lamp for busy line, green for free line). Receiver volume control is adjustable acting on knob top-right of the set.
Where maker's arrangement is inadequate, the emission volume of calling station must be checked and adjusted acting on volume control reachable after removing the base of the set.

SYSTEM DESCRIPTION
The system, powered by a single 4399/800, allows for connection of up to 19 intercommunicating internal units or up to 18 internal units and PA system via amplifier Art. 4040. The system allows for a number of simultaneous conversations equal to the number of connected units divided by two (19 units allows for 9 simultaneous conversations).

WIRING INSTRUCTIONS

The diagram features an installation of a multiple conversation (7 inter-communicating intercoms) system, consisting of all masters Art. 4330/106.

Following instructions refer to a quite similar installation with Art. 4330/112 and 4330/118.

1 - The system requires laying of a separate two wires (0.75 mm², in diameter) trunk line plus a telephonic cable housing as many couples of conductors (0.25 mm², in diameter) as the stations to be connected, plus one earth common couple, e.g. with 7 stations 7 + 1 = 8. Cables fitting the description can connect stations up to 300 m. maximum. For distances over 300 mt. increase diameter of conductors. For distances up to 100 mt. the power supply line can make use of conductors like those of the telephonic cable, with an additional two wire cable.

2 - The trunk line connects in parallel all intercoms to power supply art. 4399/001 providing voltage drop to proper values. Art. 4399/001 is powered through the main switch. With rather long lines and too thin conductors, voltage drops may occur on the supply line. It must be checked with a voltmeter that such voltage is never lower than 16V, otherwise it must be boosted simply by shifting the bridge inside Art. 4399/001 from terminal 18 to terminal 20 or 22, depending on the extent of the voltage drop. If this measure proves to be inadequate a second power supply may be connected splitting the line in two sections. It is advisable to install the power supplier at the centre of the connecting line to avoid excessive voltage drops.

3 - The telephonic cables couples are momentaneously connected in parallel to station terminals according to colours as from the side prospectus.

4 - Code-numbering of each station:
   1st station: connect terminals PL/PR with L1/R1 respectively;
   2nd station: connect terminals PL/PR with L2/R2 respectively;
   3rd station: connect terminals PL/PR with L3/R3 respectively;
   a.s.o. Connections of last station terminals undergo no charge.
VIDEO DOOR ENTRY SYSTEMS

WIRING INSTRUCTIONS FOR AMPLIFIER OUTPUT CIRCUIT ON INTERCOM AND INTERPHONE SYSTEMS

Voltage at amplifier output terminals is substantially constant (100 V). A multi-socket translator inside hornspeakers allows the connection in parallel of several speakers and the control of the sound volume to meet different requirements.

- Art. 4056: horn speaker suitable for sheds, stores, etc.
- Art. 4057: horn speaker suitable for installation in the open;
- Art. 4058: wall speaker baffle for office, waiting rooms etc.

For the installation to operate correctly it is necessary that the total sum of speakers power be inferior to nominal amplifier power against risk of overloading it.

Wiring of intercom system and network lines conductors must not be housed together, the former must also laid separately from speakers lines, to avoid typical buzzing. 0-100 V output terminals are to be connected in parallel to all speakers through bipolar cable at least 0.75mm² in diameter, to be increased where line is over 100 m long; attention must be paid to correct connection terminal-conductor.

To prevent feedback, calling points with intercoms making use of amplifiers must be soundproof as regards the speakers.

To prevent damaging the amplifier make sure the output line to speakers is neither shortcircuited nor open (i.e. with no speaker connected) before operating the installation. Once the system is powered adjust volume control first to minimum then to give satisfactory result. If in some places the power of sound is different than wanted, act only on the speaker concerned.
